

PRODUCT FEATURES

Phosphorus and Potassium are two of the three most important elements to plants. Each are required in large amounts with deficiencies in either one having dramatic effects on plant growth. Most soils have a deficiency in Phosphorus and Potassium, particularly in high rainfall areas. A lack of Phosphorus leads to poor root development, stunted growth and purple discolouring on leaves. Potassium helps plants resist disease and improves flower, fruit and seed quality. A deficiency is evident by weak stems, floppy leaves with yellow or brown tips.

ANALYSIS

ANALYSIS	%W/W
PHOSPHORUS (P) present as water soluble	23.0
POTASSIUM (K) present as phosphate	28.0

Available in:

500g boxes - 6 per carton

Code: MTO0566

Barcode: 9312462665002

DIRECTIONS FOR USE

Dissolve 5 grams (1 level measure of enclosed spoon) to each 2 litres of water and apply liberally over foliage and the soil surrounding the root system. Repeat application 3 or 4 times at weekly intervals. Depending on the severity of soil deficiency, further applications may be necessary.

Foliar spray: dissolve at the rate of 1 gram per litre of water and spray thoroughly over foliage during mild weather conditions. Use half strength solution for young and sensitive plants. As foliar sprays provide only a fast and temporary fix for deficiency, regular soil application is also advisable for long term effectiveness and results.
