DIRECTIONS FOR USE

Manutec Tomato Food can be applied by drip irrigation or watering can. Full strength applications should be limited until the first bunch has set and fruit has reached the size of a 20 cent coin.

To mix up a full strength nutrient solution:

Dissolve 5 grams (1 heaped measure of enclosed spoon) of Tomato Food in each 5 litres of water. Thoroughly saturate soil around each plant. Apply feed at every watering throughout the season.

Applications by drip or spray require a half strength solution.

Dissolve 5 grams in 10 litres of water. Spraying both sides of the leaves improves fruit set and growth. Always spray in cool, shady conditions, never in direct sunlight.
